CLAIMS.

1. A method of storing printed products in one or
5 more layers, characterised in that the printed
products are stored on at least one substantially circular conveyor track (1), in that the printed products
are supplied to the conveyor track (1) at least at one
point in the track (1), in that the lowermost layer is
10 discharged from the conveyor track (1) through an opening
(2) in the track (1), and in that the supplying and
discharging of products are independent of each other.

2. A method as claimed in any one of the preceding
claims, characterised in that printed pro-
15 ducts are supplied to the track while at the same time
printed products are discharged from the track (1) at the
opening (2).

3. An installation for storing one or more layers of
printed products, comprising one or more conveyor tracks
20 (1), characterised in that the printed pro-
ducts are stored on a substantially circular conveyor
track (1), said track (1) being provided with at least
one opening (2) for discharge of the lowermost layer, in
that the conveyor track (1) comprises means (3) for
25 guiding the lowermost layer away from the track (1)
through the opening (2), and in that the supplying and
discharging of products are independent of each other.

4. An installation as claimed in claim 3, character-
ised in that the means (3), when in a first
30 position, bridges the opening (2), whereby the conveyor
track (1) is continuous and the lowermost layer of
products is held on the track (1), that the means (3),
when in a second position, is raised, whereby the track
(1) is discontinuous and the lowermost layer of printed
35 products is discharged away from the track (1) through
the opening (2).

5. An installation as claimed in claim 3-4, characterised in that said means (3) is a flap which is movably arranged in the opening (2).

6. An installation as claimed in any one of claims 3-5, characterised in that said track (1) is arranged with at least one edging adapted to hold the printed products on the track (1).

7. An installation as claimed in any one of claims 3-6, characterised in that two or more tracks (1) are arranged concentrically.

8. An installation as claimed in any one of claims 3-7, characterised in that at least one or more tracks (1) are arranged above a first track (1).

9. An installation as claimed in claim 7 or 8, characterised in that the tracks (1) operate independently of each other.
